

Dear FCC

Please continue to allow satellite radio to broadcast local content because it is a driver safety issue. As I'm sure you're aware, terrestrial radio also broadcasts local traffic and weather programming too. But with terrestrial radio, drivers almost always have to wait 10 or more minutes to get an incomplete road condition report that lasts for 2 minutes. Please, for the sake of driver safety, allow satellite radio to continue broadcasting its more frequent and better detailed road conditions and weather information.

Please reject NAB's petition 04-160. America's family's will thank you.

Sincerely, Ben Saltoun
